Practical evaluation of the Isotrol system for maintenance painting

We have, for a duration of 13 years, used the Isotrol rust-protecting system consisting of

1. Isotrol Primer
2. Isotrol Armour
3. Isotrol Finish

We have applied the paint system under changing weather conditions to objects of varying character, from a complete repainting of a bridge to touch-up painting of bridges.

Also snowplows, snow buckets and salt and sand distributors have been painted with Isotrol and the results have been evaluated from rust protection as well as snow release viewpoints.

Our opinion is that Isotrol, even with a simple pre-treatment, gives a good result. The application properties are good and the products are more environmentally friendly than red lead. We are very content with the results we have got by using the Isotrol rust protection system and we warmly recommend all the products of the system.

Bengt Wikberg
Works manager for preventive bridge maintenance
