Isotrol. Anti corrosive protection.

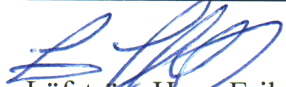

We are a ship repair yard in Mariehamn in the Aland Island. We have for years tried to find a paint for use in very heavy condition, when we repair ships. It is from time to time very hard to find a paint that can be used for surfaces which can not be sandblasted or be prepared the regular way. Then for about 15 years ago we found Isotrol. And for the first time we got a paint that the can be used on the surfaces which before was difficult for us to get a satisfactory coat.

Fore example we have used this products on our harbour crane. For five years ago we washed the crane and painted it, and it still looks like it was painted yesterday.

There we have used Isotrol, our customers are very satisfied with the results, and we can see that the protection from the paint is still very good.  
Therefore we can strongly recommend Isotrol for surfaces where it is not possible to sandblast or on surfaces with very poor conditions.

Best regards
