Dear Mr Kjellberg

Kynningsrud Heavy Lift AB are members of the Kynningsrud Group, working with lifting and transport by land and sea. Our share of the market in the Nordic countries about 70% of the available market. We have also specialized in providing temporary support bridges (way beams) for the Swedish National Rail Administration.

All of our equipment is made of steel. It is frequently loaded and unloaded and is then exposed to very rough handling. To protect our equipment we have chosen the Isotrol System considering its superior wearing strength and qualities. It is also very important to us that any damages to the coating can be repaired quickly and with a good result. It is easy to imagine the consequences of carrying out heavy lifts with rust damaged equipment

Since we started the company we always use the Isotrol System to protect our equipment on site and at our depot.

Best regards

Kynningsrud Heavy Lift AB

Bengt Nilsson
Manager
