Mr. LARS KJELLBERG

Baltic Shipping Co, once one of the biggest shipping companies in The Soviet trading fleet, Morflot, had more than 200 vessels. Many of them visited regularly The Finnish shipyard Wärtsilä in Turku, Finland during the 70`s and 80`s.

On surfaces where we of different reasons couldn't sandblast we often used Isotrol. The reason was that Isotrol had proved to be effective, even if the surface was corroded or impossible to clean properly.

Isotrol is a surface tolerant primer with high penetrating capacity and is easy to handle. Even in combination with cheap local topcoatings we got good results.

We have also used Isotrol on our passenger vessels for touch up painting in order that the vessels looked nice.

We have used " The Isotrol System" besides traditionell heavy painting system for more than 25 years with excellent results and can therefore strongly recommend Isotrol when it is not possible to sandblast or on surfaces with very poor condition.

Best regards

Arnold P. Rusin

As a President of Baltic Shipping Co
