ISOTROL ANTI CORROSIVE PROTECTION

Referring to our phoneconversation regarding above topic we would like to make the following statement.

We are a shipping company, operating tugs and barges within the towing and offshore industri in northern Europe since decades.

Over the years we have of course tested various kinds of anticorrosive products in order to obtain a maximum result.

As we some 15 years ago for the first time learned about ISOTROL and had the opportunity to test it as a primer, we very soon came to the conclusion that it was a very competitive product. We have used it as primer on all parts of the abovewaterareas on tugs and barges.

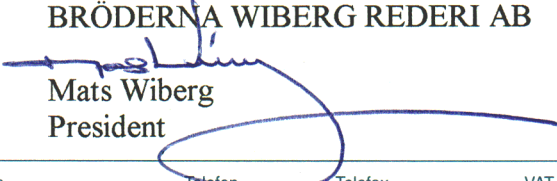

Experience has indicated that ISOTROL is very effective under the circumstances that we are operating. We are suffering from constant mechanical damage on deck hull and shellplating which requires running maintenace. Due to this it is impossible to have a totally clean surface all the time and this is where Isotrol has proved to be very effective despite the surface still beeing partly corroded by rust. In addition it has also proven to have a high degree of penetrating capacity which is of utmost importance when dealing with corroded areas.

On top of the primer we have used ordinary finish.

Our summary thus is that we intend to continue with ISOTROL in our future maintenace program as we have found the product beeing very effective for us.

Best regards
